This version contains some bug fixes. It includes an update which forces users to change their passwords.

Database changes:
run script menu\sql\mysql\alter_table(2017-02-12).sql in order to change the structure of the MENU database

Other changes:
fixed bug in where2indexedArray() so that it deals with '(SELECT COUNT(*) FROM .....) = 0' properly.modified processing of $this->no_foreign_data so that it will still process _cm_getForeignData() but skip processing of $this->parent_relations array.added column FORCE_PSWD_CHG to table MNU_USER which will force the user to change his password at the next logon regardless of any policy on days or logons. This flag will be set to 'Y' whenever a user's password is reset, but only if the corresponding 'Force Change?' value on the Menu Control record is set to 'Y'.modified processing of WHERE string to allow both of the following: lower(product_name) LIKE '%hello%' product_name ILIKE '%hello%' added the ability to filter records from the display in the _cm_post_getData() method.
