Thank you Mr Tony, it's very useful information ..!
but You have said in the installation:
12.To run the application please point your browser to http://localhost/radicore/index.html and use one of the 'logon' hyperlinks. When the logon screen appears you can use the following:
User = MGR
Pswd = password (case sensitive)

it's OK, But what is the password?
Referred to the database, I found that all passwords are encoded (menu_user table)
I could only log in with one account demo/demo
I think It's a limited account
what should I do?
