Subject: Parent: child process [####] exited with status 255 -- Restarting.

Hi there,

I've just installed RADICORE v2.04.1 and trying to complete the tutorial 2 (http://www.tonymarston.net/php-mysql/radicore-tutorial2.html).
Every time I run the "Generate PHP" from dictionary->database->tables->read my Apache 2.4 restarts with the following message:
[Thu Jun 22 14:29:08.466464 2017] [mpm_winnt:notice] [pid 10356:tid 748] AH00428: Parent: child process [####] exited with status 255 -- Restarting.

I've followed, or I think I have, every single step from the tutorial 1, had no issues whatsoever but once I got to this point of generating PHP for table x_option my system crashes.
I'm using WAMP(64) on a Win10 PC.

Any ideas of what might have caused it?

Thanks for any tips/hints you might want to share

Fabs
