Subject: Adding membership subscription functionality to RBAC

Hi Tony et.al.

I hope this is the right area for this post, apologies in advance if not.

I would like to be able to have users signup for there own account with a predetermined role on a subscription basis.

I would like to be able to give them a URL which anyone can go to so that they can subscribe. Visitor would specify their name, email, chosen password etc. as well as provide setting up subscription details via PayPal.

What issues do I need to consider within the Framework, and how can I manage their user accounts so that if subscription fail their account becomes restricted etc.

Would it be best for me to manage all of this using an external third-party subscription management system which amends the mnu_user explicitly. Or is this something which I could/should try to incorporate into the RBAC?

Any guidance would be greatly appreciated.

Best regards

Henry
