semcycle wrote on Mon, 12 June 2006 00:21first off - thanks Tony , what an awesome framework !!
Thanks. It's gratifying to now that my humble efforts are not a complete waste of time.

As for your error, if a field is defined as NOT NULL then by definition it *IS* required, but I take your point that if a default value has been defined then it should be used whenever no value has been input, required or not. I shall incorporate this fix in my next release.
