Hi,
I been looking that you suggested, but everything was ok. All the files in place.
I changed my computer lenguaje to english, and now I think where is the error, looking back to the program calls.

(!) SCREAM: Error suppression ignored for
(!) Fatal error: File C:\wamp\www\radicore\menu\text/en/sys.language_text.inc is empty in C:\wamp\www\radicore\includes\include.library.inc on line 3651

Call Stack
Time Memory Function Location

1 0.0108 297272 {main}( ) ..\logon.php:0
2 1.9224 7200504 radicore_view->__construct( ) ..\logon.php:212
3 1.9258 7318944 trigger_error ( ) ..\include.xml.php5.inc:37
4 1.9258 7319776 errorHandler( ) ..\include.xml.php5.inc:37
5 1.9258 7326560 getLanguageText( ) ..\error.inc:166
6 1.9267 7247992 trigger_error ( ) ..\include.library.inc:3651

Found that probably the problem is with XSL functions. In the include.xml.php5.inc
--> trigger_error(getLanguageText('sys0070', 'XSL'), E_USER_ERROR);
Looking at installation instructions, in point
4. You will need to change permissions so that the following directories have write access:

RADICORE - for the errorlog.html file.
CLASSES - for all <table>.class.inc and <table>.dict.inc files.
ERROR_LOGS - for errorlog.html file.
LOGS - for all output from background tasks.
SQL - for all <subsystem>.dict_export.sql and <subsystem>.menu_export.sql files.
TEXT - for all <subsystem>.menu_export.txt files.
XSL - for all <script_id>.xml files.

Probably that is my problem!
But in my actual windows 10 enviroment and don't know how to do this.
Do I have to change in the httpd.conf?

Thank you for your support!
