Please see an attached file with an error using ADD1 transaction, it happens when I try to send an error message using this->error
This is my validation code:

```
function _cm_validateInsert ($rowdata)
   // Valida el datos del registro
   {
      $cedrucpas = $rowdata['cedularucpas'];
      if (!$this->validarCedula($cedrucpas)) {
         $this->errors['cedularucpas'] = getLanguageText('e0001');
      }
      return $rowdata;
   } // _cm_validateInsert
```

The attached shows the Radicore Application Error

Any ideas why it happens? Please your help!
