The relationships seems to be fine.

I put the following code in the _cm_PopUpReturn() function:

```
function _cm_popupReturn ($fieldarray, $return_from, &$select_array, $return_files)
     {
 // liest Daten in AbhÃ¤ngigkeit des aufrufenden Formulars ein
 switch ($return_from) {
  case  'htm_orga_vereine(popup1)' :

  // get contents of foreign table ORGA_VEREINE
  $dbobject =& RDCsingleton::getInstance('orga_vereine'); // Instanz fÃ¼r Lookup-Tabelle
  $where = "verbaende_art_id='{$select_array['verbaende_art_id']}'
  AND verbaende_kuerzel='{$select_array['verbaende_kuerzel']}'
  AND vereine_kuerzel='{$select_array['vereine_kuerzel']}'";

  $data = $dbobject->getData ($where);

  if (!empty($data)){
   $data = $data[0];

                    $fieldarray['kontakt_stamm_verbaende_art_id'] = $data['verbaende_art_id'];
                    $fieldarray['kontakt_stamm_verbaende_kuerzel'] = $data['verbaende_kuerzel'];
                    $fieldarray['kontakt_stamm_vereine_kuerzel'] = $data['vereine_kuerzel'];

                    $fieldarray['kontakt_stamm_vereine_name'] = $data['vereine_name'];
  } // if
  else
  {
   $fieldarray['kontakt_stamm_vereine_name'] = '';
  }
  // else

  } // switch

  return $fieldarray;

 }
```

The key values for verbaende_art_id, verbaende_kuerzel and vereine_kuerzel are changed as well.
