I attached the orga_mannschaften_kontakte.dict.inc so you can see the fields.

The fields 'kontakt_stamm_verbaende_art_id', 'kontakt_stamm_verbaende_kuerzel', 'kontakt_stamm_vereine_kuerzel' relate to table 'orga_vereine' where the logo is saved which I want to display. The key fields begin in almost all tables with these fields. So I have the possibility for relationships.

$field_array in _cm_PopUpReturn has the correct key values
$select_array has the key values of the chosen record in the popup form

But you can see that in the screen the key values are changed from $field_array values to $select_array values.
