The CSRF values are created in include.xml.php5.inc when the HTML output is generated. See lines 1026, 1964 and 2002.

These values are verified in include.session.inc during the initsession() processing. See lines 969 and 1024. A new value is also generated in the scriptNext() function at line 2685 and the scriptPrevious() function at line 2856.
