Ok, let me try out this file, thanx in advance.
But i want to make my point clear:
'Warning: error_log(/var/www/html/demo/error_logs/errorlog.html): failed to open stream'
- to me weird is 'demo' folder (which i don't have and it is somehow assumed to be located outside framework root - which is 'radicore').
Whereas 'radicore' directory really has 'error_logs/errorlog.html',
and that's where installation script loses its way .
But let me first re-try this with your amendments made, thank you!
