2) If I understand right as explained in RADICORE for PHP - creating PDF output, I can change the border of the head with ['name']['font']['border'] with the value 'B' for showing only the bottom lines. But I only can change the colour of the lines. They were always shown all (L,R,T,B). Here is my pdf.style.inc record:

```
// column headings Kontakte for LIST view
$style['hdg_kontakte']['font'] = array('family' => 'Times',      // Courier, Helvetica, Times
                        'style' => '',          // blank=Regular, B=Bold, I=Italic, U=Underline
                        'size' => 9,            // size in points
                        'height' => 5,          // line height in units
                        'draw' => .3,           // width of drawn lines
                        'border' => 'B',         // position of border lines
                        'halign' => 'left');    // horizontal text alignment (left, right, center)

$style['hdg_kontakte']['fillcolour'] = array(255,255,255);       // colour for background
$style['hdg_kontakte']['textcolour'] = array(0,0,0);         // colour for foreground
$style['hdg_kontakte']['drawcolour'] = array(0,0,0);          // colour for line drawing
```

Did I forget something?
