Do you have an example of _cm_formatData() where you call the $css_array()?

I created the above entry in style_custom.css and want to call this in _cm_formatData() with the line: $css_array['bewertung_text'] = 'textarea.mltb'; But nothing happens.
Only changes in css\default.css change the look of the textarea. What is wrong with my code?

```
textarea.mltb {
  background-color: green;
  color: black;
  border: #000000 0px solid;
  font-size: 100%;
  overflow: auto;
}
```
