This can be done, but not easily. Simply inserting HTML tags into the text will not work as '<' and '>' characters will be translated into '<' and '>'. You can, however, use a javascript editor such as fckeditor or tinymce. If you visit the demo app and go into the 'Example Subsystem', then choose 'List Person' followed by 'Update (js)' you will see two additional navigation buttons called 'Update (fckeditor)' and 'Update (tinymce)' which provide working examples.
