The XAMPLE subsystem has its own javascript directory in which there are separate subdirectories for tiny_mce and ckeditor. The class file 'x_person_s03.class.inc' uses the ckeditor library while 'x_person_s05.class.inc' uses the tiny_mce library. You can see the relevant code in the '_cm_setJavaScript()' method. If you want you can move these two subdirectories from 'radicore/xample/javascript' to 'radicore/javascript', but you will have to amend the path in your code.
