You need to take a look at http://www.tonymarston.net/php-mysql/menuguide/mnu_role_task field(multi)a.html and http://www.tonymarston.net/php-mysql/menuguide/mnu_role_task field(multi)b.html

These tasks allow you to change the accessibility of individual fields within a form based on the user's role. By default each field is granted FULL access (read and write), but this can be changed to NOEDIT (read only) or NODISPLAY (hidden) for individual roles and tasks.

Is this what you are after?
