I added the following code in _cm_changeConfig():

```
        if ($GLOBALS['task_id'] == 'htm_orga_mannschaften_ausruestung_kontakte(add2)') {
            // insert some javascript to submit form when a different value is selected in this dropdown
list
            $this->fieldspec['gr_art']['javascript'] = array('onchange' => 'this.form.submit();');
        } // if
```

Is it right that the following code in the _cm_setJavaScript() method should call the _cm_updateFieldArray() method? Or will the form be sent to the server directly? Because the _cm_updateFieldArray() method will not be called in my class.

```
        // specify javascript events on certain fields
        if ($mode == 'insert' or $mode == 'update') {
            $this->fieldspec['gr_art']['javascript'] = array('onchange' => 'this.form.submit();');

        } // if
```
