If I change the value in the dropdown list the value of a numeric field will be increased by a factor of 100. From 50,00 to 5000,00 and so on, each time I change the dropdown field value. In the $postarray in _cm_updateFieldArray() the value is still correct. Seems to come from the comma ',' instead of the '.'. Do I have to change something in $fieldspec in _cm_changeconfig() or somewhere else?
