Sorry about the circumstances, but I use Eclipse IDE and I echo the values for proofing. In this case the value for array[0] is ''. And the values I need are in the arrays [1], [2] and [3].

You told me in earlier posts that I only should examine my own code. That's what I did. You are right that I am not that familiar with working with a debugger. Stepping through all your code, line by line is very time consuming and I don't exactly know what I am looking for to see where the value of my numeric field will be changed in the way I described. Can it be that this is a problem with the different spelling of numeric values in England and Germany? "1,000.00" instead of "1.000,00"?
