Subject: List pattern - fields of joined tables disappear by reset

Hi Tony,

I have a question about the framework. Each time I press the reset button in list1 or list2 pattern the values of the fields of the joined tables (in controller script) are gone. Only empty fields.

I tried to login into the demo version to see if there is the same behavior but the demo user is disabled. In the list database screen, database(list1), all the values of the tables, child and parent relationship disappear, if I press the reset button. This is also code, written in the controller script. Is this normal behavior or do I have to set some settings?
