Subject: Cannot delete audit data

Greetings,
Potentially this issue exists for some time in my environment. For whatever reasons I cannot delete the audit data. Not a general problem of running batch jobs, I have a few which I use regularly. Also no issues anywhere else in the framework. The issue occurs in versions 2.19 as well as 2.22.
Stack trace (taken from version 2.19) says:

```
1: array =
  file: string = /var/www/html/radicore/includes/include.session.inc
  line: integer = 985
  function: string = trigger_error
  args: array =
    0: string = unserialize(): Error at offset 0 of 50214 bytes
    1: integer = 256
2: array =
  file: string = /var/www/html/radicore/includes/std.delete3.inc
  line: integer = 22
  function: string = initSession
  args: array =
3: array =
  file: string = /var/www/html/radicore/audit/audit_ssn(batch)delete.php
  line: integer = 19
  args: array =
    0: string = /var/www/html/radicore/includes/std.delete3.inc
  function: string = require
```

This is the corresponding code block from include.session.inc:

```
// session could not be created, so find out why
$dbobject = RDCsingleton::getInstance('php_session');
$string = $dbobject->read(session_id());
$_SESSION = unserialize(trim($string), array());
if (!is_array($_SESSION)) {
   trigger_error($GLOBALS['php_errormsg'], E_USER_ERROR);
} // if
```

Any instant idea, why this one is failing?

Kind regards, Divico
