I don't know where is my fault.

If I call the following php file, the â^ sign will be shown correctly in a pdf file.

```
<?php
require('c:\xampp\htdocs\radicore\includes\tcpdf\tcpdf.php') ;
$pdf = new TCPDF();
$pdf->AddPage();
$pdf->SetFont('times', "", 16);
$pdf->Cell(40, 10, 'GroÃYes Sigma: Î£'); // Funktioniert mit Unicode
or
$pdf->Cell(40, 10, 'GroÃYes Sigma: ' . "\u{03A3}"); // Funktioniert mit Unicode
$pdf->Output();
?>
```

If I define a field in my report nothing will be shown. - array('field' => 'sigma', 'width' => 10, 'x' => 0); - \$sigma = "\u{03A3}";

If I define a label with value "\u{03A3}", a ? will be shown. - array('label' => "\u{03A3}", 'width' => 10, 'x' => 0);

The value sigma will also be shown correctly if I output it in my class file with
var_dump("\u{03A3}");
