I tried running a test with the sigma character on my PC using the Times font and it displayed as '?' which is incorrect.

I tried running example_008.php in the TCPDF download as this demonstrates the ability to print numerous UTF-8 characters. I even added 'GroÃŸes Sigma: Î£' to the 'German (de)' entry in the examples/data/utf8test.txt file and it printed as it should. I noticed that the font used in that test was 'freeserif', so I changed the font in the RADICORE test to 'freeserif' and the sigma character displayed correctly. I even tried the 'freesans' font, and that displayed correctly as well.

It would appear that the 'Times' font will not display this character, so you will need to switch to a font that does.
