A little lost,

I have a 3 tasks based on tablename(upd4).php, that I would like to use to update multiple records. I have read the "update 4" in the dialog-types, which says perform the modifications within the table class, but am not sure how to proceed.

The three I have are tablename_task1(upd4).php, tablename_task2(upd4).php and tablename_task3(upd4).php. I want to be able to detect which one is called inside the table class, and update certain fields accordingly. Any examples of using update 4, that I can refer to?

Thanks in advance,

Dan
