Tony, many, many kudos for all the work you have put into Radicore.
OK.
I have done everything in Radicore for PHP - Tutorial (Part 1).
With regard to Generate Transactions...
I selected a single table and the Pattern: LIST1 - List multiple records.
Presumably, there is now php code somewhere that I can use to view data using the LIST1 pattern.
How do I run this code?
Is there an index.php file somewhere in the directories used by Radicore? Or, is this accessible by using the standard Radicore logon? I can't figure out this step...
