For a list1 screen, and possibly others, setting $sql_orderby_seq='desc' has no effect - the order is still asc. A workaround is adding desc to the end of the $sql_orderby, as in $sql_orderby='location desc' to sort by the location field in descending order.

It may be best to remove $sql_orderby_seq completely, and let the sequence be defined in $sql_orderby, as that appears to be the way the existing code works.

If you want to set the sort sequence for a particular LIST1 transaction then the correct way to do it is to set the 'Order By' field in the 'Update Task' screen. I have tested it, and it works perfectly.

$sql_orderby_seq is there to allow toggling between 'asc' and 'desc' on whatever field is specified in $sql_orderby.
