This post is about helping us make a system that will accept an XMI file and will generate a PHP application based on the XMI used as input. Thank you for the help.

Radicore does not use XMI files. It does not generate application components from XMI files. The transaction generation mechanism is documented at
http://www.tonymarston.net/php-mysql/radicore-tutorial.html# generate.transactions

The only applications that will run under Radicore are those which are specifically developed with Radicore using the procedures documented in
http://www.tonymarston.net/php-mysql/radicore-tutorial.html

There is no XMI interface to Radicore, and I do not plan on creating one.
