This version contains the following changes:

Database changes:

run script 'menu/sql/mysql/alter_table(2014-05-07).sql' to change the structure of the MENU database.

Other changes:

modified the MNU_LANGUAGE table to increase the size of the date_format columns. This is to allow for Asian dates which contain symbols.
modified 'php_session.class.inc' so that it ignores $GLOBALS['server_timezone'] when setting the 'date_created' and 'last_updated' columns. This was causing problems with session garbage collection when the application timezone was different from the database timezone.
modified 'dml.pgsql.class.inc' so that it sets the database timezone to be the same as date_default_timezone_get();
fixed bug in 'dml.oracle.class.inc' which caused an incorrect conversion of 'DATE_SUB(field1 - INTERVAL $field2 unit)' to '($field1 - INTERVAL '$field2' $unit)'.
fixed bug when attempting to use the 'recover password' option on the logon screen.
modified 'std.filepicker1.inc' so that if the directory contains more than 2000 files the file names will be read once and stored in a cache instead of being read from disk each time. The cache will be per session, and if the RESTART button is pressed it will be rebuilt.
added function 'replaceScreenLabels()' to work in DETAIL screens to complement 'replaceScreenHeadings()' which works in LIST screens.
updated 'std.pdf.class.inc' to allow all fonts to be changed if the language changes. Please refer to FAQ159 for details.
modified the logon process to check the record counts on the 'mnu_task_ip_address', 'mnu_user_ip_address', 'mnu_time_limit_role' and 'mnu_time_limit_user' tables so that if they are empty no further lookups are performed on all subsequent web pages in the current session.
updated 'std.imap.class.inc' to use imap_errors() if imap_open() returns false.
