I have images and files stored as blobs. Will radicore handle this or do you recommend removing the data from the db and store it on disk?
thanks

I have never put images or files in the database, so Radicore has no in-built mechanism of handling such files. Radicore can store pointers to such files in the database, but not the contents. You can put them there if you wish, but you will have to write your own code to do it.

ok, thanks. I've never liked them in the db. this is a good excuse to remove them
