Subject: setOrderBy function working incorrectly

There is a small typo in the function setOrderBy ($sql_orderby, $sql_orderby_seq=null); in std.table.class.inc line 2522

Supplying the paramater $sql_orderby_seq has no effect on the order by sequence because of the following code...

```
if (!empty($sql_orderby_seq)) {
        $this->sql_orderby_seq == $sql_orderby_seq; <-- testing for equality, not assignment
    } else {
```

This should read ...

```
if (!empty($sql_orderby_seq)) {
        $this->sql_orderby_seq = $sql_orderby_seq;
    } else {
```

Cheers,
Braingeyser

Thanks for spotting that. It will be fixed in the next release which will be in the next day or two (hopefully).
