I have create subsystem "Test" and user to have access to this subsystem. Now after logging in user is in "Home" menu

http://localhost/radicore/menu/menu.php?session_name=menu1&a mp;selection=test

After clicking on subsystem "Test" menu there is no way back to "Home". I can see Home>>test but "Home" is not a link.

What "Task" should this user role have? I gave it:

menu, Home Page
main_menu, Main index page

beside access to "Test" subsystem tasks where everything works fine.

Is the option "Test" a menu or a proc?

If it is a menu then when 'home>>test' is shown 'home' will be a hyperlink.

If it is not a menu then 'home' will not be a hyperlink and you will have to use the browser's 'back' button.

It's a proc. And that helped me Thank you.

I just set role of this user to start with "main index page" not a "main menu of this subsystem".
