I have created a class for custom validation and executes properly. The thing is, I am getting only a blank screen after the update. I have to be login again for continue. The record is updated after proper validation. The class i created if as follows. I have updated the concerned column in the data dictionary as
SubType=CUSTOM
custom validation = douglas.validation.class.inc/douglas_validation_class/source _id

The class is as follows

```
<?php
class douglas_validation_class
{
   function source_id (&$input, $fieldspec)
   {
      $input = strtoupper($input);

      if (!empty($input)) {
         $pattern = "^[A-Z]{1,2}$";
         if (!ereg($pattern, $input)) {
            return getLanguageText('validation001');
         }
      }
      return;

   } // source_id
} // end class
```

Kindly inform me what has happened wrongly.
Thanking u sir,
Douglas
?>

If you are using a version of Radicore which is greater than 1.20.0 (as you should be) then there is no need to set SUBTYPE=CUSTOM. This is documented in
http://www.tonymarston.net/php-mysql/custom-validation.html

The sample code provided in the Radicore download works OK, so the problem must be somewhere else in your code.

It is not possible to tell what is happening from your description. You will need to step through with your debugger to see where the glitch occurs.
