Hello,

I would like to see if someone successfully setup Radicore in Mac OS? Or if in Linux (LAMP), can you please share with me your files (e.g. htaccess.txt, config.inc, etc.) needed from the installation manual? Thanks so much.

Regards,
Gerald

You are having problems because you have not set up your include_path correctly. Fix this and your problem will disappear.

Thanks for your response. When I checked phpinfo() for include_path, it shows: ".:/Applications/MAMP/bin/php/php7.0.0/lib/php" where in my htaccess.txt, it is: "/Applications/MAMP/htdocs/radicore/includes".

Do I change the configuration from phpinfo? Please advise. Thanks.

Have you modified your Apache config file so that it can process the htaccess file? Look at step #2 in the installation instructions at http://www.radicore.org/installation.php
