Subject: MNU_ACCOUNT - Add new account

If I want to add a new account I get the error message:

[0] [rdcaccount_id] A record already exists with this Id.

At the moment the only way to add a new account is to insert it manually in the mnu_account table.

The user which wants to create the new account has Global access and the field account id (in user properties) is empty. In implementing a virtual private database is written that without a value the user has shared access and can create new accounts.

What meaning has the field rdcversion?

The attached file contains a fix for that bug.

For a description of rdcversion (and other reserved words) please read FAQ89

I have made some other changes to this file, and this version works as expected.
