I can set up a user, but not delete them. Looking through tutorial I could not see how to run a generate php script creation to facilitate this. Probably missed a step somewhere.

In List User on selecting Delete I get the error:

Fatal error: validatedelete(): Failed opening required 'f:/webdev/www/energyexiles/radicore/request/classes/request _role.class.inc' (include_path='.;F:\Easyphp\www\energyexiles\radicore\INCLUD ES;../menu;../audit;../workflow;../dict') in F:\webdev\www\energyexiles\radicore\INCLUDES\std.table.class .inc on line 3322

There are no scripts in the 'request' directory so I guess I have not created them.

Radicore version 1.23

Many thanks for your patience

Mike B

That is my mistake. The file 'mnu_user.dict.inc' contains entries in the $this->child_relations section which I have created but not included in the download. Attached is an amended version of this file which should solve this problem.

File Attachments
1) mnu_user.dict.inc, downloaded 1527 times

An alternative approach would be to recreate this file yourself from the Data Dictionary. From the main menu choose Dictionary->Databases, select 'menu', press 'Tables', and select 'mnu_user'. You can press the 'Relationships (table)' button to check that there are not any entries which should not be there, then press the 'Export to PHP' button to recreate the 'mnu_user.dict.inc' file.
