This version includes some bug fixes, and the ability for a filepicker task to list video files.

Database changes:
- none

Other Changes:
updated std.add1/2/5.inc to include call to $object->quitButton() when CANCEL button is pressed.added the generateGUID() function to include.library.incupdated SQL Server processing to avoid the error 'New transaction is not allowed because there are other threads running in the session'. Calls to $dbobject->getDataSerial(), $dbobject->fetchRow() and dbobject->free_result() are now done using a separate instance of the database driver. This means that if any database updates are performed after a call to ->fetchRow() the call to ->startTransaction() will no longer fail.updated 'std.validation.class.inc' to disallow a '%' character from being used in a primary or unique key as this is used as the 'wildcard' character in database searches.updated 'std.filepicker.list1.xsl' to allow video files as well as still images.updated 'std.table.class.inc' so that when a task is initiated via append2ScriptSequence() with 'action' = 'OK' (meaning that the QUIT/CANCEL button is invalid and the task should only be terminated with a SUBMIT button) then the QUIT/CANCEL button is removed so that it cannot be pressed.
