Hello:

I'm following the Tutorial. After clicking on any button in Home->Dict (Databases, Tables, Keys, Relationships or Columns) the following error page appears:

Fatal Error: MySQL error: 1064 : You have an error in your SQL syntax. Check the manual that corresponds to your MySQL server version for the right syntax to use near '"menu".mnu_subsystem ON (mnu_subsystem.subsys_id=dict_database. (# 1064).

SQL query: SELECT SQL_CALC_FOUND_ROWS dict_database.database_id, dict_database.database_desc, mnu_subsystem.subsys_desc FROM dict_database LEFT JOIN "menu".mnu_subsystem ON (mnu_subsystem.subsys_id=dict_database.subsys_id) ORDER BY dict_database.database_desc asc

Deleting the double quotes fixes the problem. Where do I have to correct this problem? Am I doing something wrong or it is a bug? I'm using version 1.24.0

Any help will be appreciated. Thank you.

Luis.

It would also help if you stated which version of PHP and MySQL you are using.

In order to fix this error please refer to paragraph 6 in http://www.radicore.org/installation.php

My apologies.

PHP: 4.3.9
MySQL: 4.0.24
Apache: 2.0.53
Windows XP

While investigating these versions I added line sql_mode = ANSI_QUOTES in my.ini and this fixed the problem.

Because I would like to upgrade these tools I'd like to know if anyone is running Radicore without problems after installing WAMP5 or similiar packages. Sorry if this is not a question completely related to Radicore installation.

Thank you.

I personally have never used any of those all-in-one installation packages as I prefer to install each part individually. In that way I can keep each part completely up-to-date.

I have heard of the occasional problem with some of their installations due to mismatched extensions, which is another reason why I would not use them.
