Tony, many, many kudos for all the work you have put into Radicore.
OK.
I have done everything in Radicore for PHP - Tutorial (Part 1).
With regard to Generate Transactions...
I selected a single table and the Pattern: LIST1 - List multiple records.
Presumably, there is now php code somewhere that I can use to view data using the LIST1 pattern.
How do I run this code?
Is there an index.php file somewhere in the directories used by Radicore? Or, is this accessible by using the standard Radicore logon? I can't figure out this step...

When you perform the step shown in http://www.tonymarston.net/php-mysql/radicore-tutorial.html# build.directory it says that a task of type 'menu' will be created with the same name as the subsystem id. This menu will also be added to the main system menu (called "main_menu") which is visible when you select the "home" hyperlink.

Every time you create a LIST1 pattern it will automatically be added to the subsystem menu. Just press "home" then "subsystem" and you should see it.
