I'm achievo atk user, now want to shift to radicore for some work flow designs..I had problem in installation as a completed the steps mentioned in the manual and was able to login without any problem.

The only problem is in the application & PROTO menu when I click on Application or PROTO menu my menus disappears and wont get any options.

thanks in advance

regards,
shankar

The reason that no options appear when you select the "Application" or "Proto" menus is that no options exist for those menus in the MENU database. Although several prototype applications are included with the Radicore download they are not included in the MENU import by default - you need to load the relevant sql scripts manually. Refer to item 5(d) in http://www.radicore.org/installation.php

thanks for the quick reply. yeah i do understand and even i have installed all xamples. like survey, product etc.

now how do i update menu for these applications?

regards,
shankar

Look for the '<subsystem>.menu_export.sql' script which exists in the subsystem's 'sql' directory. This must be imported into your MENU database.
