Subject: Multi-line text box not working on inner table of MULTI2

A multi-line text box on the inner table of a MULTI2 does not POST a separate entry for each record.

If I look at the HTML, I can see that textarea field in each row has the same name. In my case
name="notes" for all records
rather than
name="notes[1]", name="notes[2]" etc

The result is that when I hit submit, all the records get updated to the value of the note filed in the last record.

The attached file should fix this.

Thank you for always being so prompt with providing fixes. I really like your framework. It is very well thought out and is incredibly flexible. Even when I do things that are a little different than you may have intended, your structures still work, which I see as evidence of a great design.

It is gratifying to know that there is someone out there who appreciates my efforts.
