Subject: Radicore v2.05.0 - no xample zip file in release

When compared to Radicore v2.04.2, the current v2.05.0 does not have the xample.zip file or it's extracted form.

There is now a new radicore_admin.zip file - should it be extracted to admin or radicore_admin folder?

Since the new release contains extra fields / database changes in the core, will the existing xample application work with them?

Each release contains a set of Thumbs.db files that can be removed.

Consolidating all htaccess.txt files into one webserver conf file would be useful.

A search and replace for all 0D 0A to 0A and 09 0A to 0A in a hex editor can cleanup the release.

Attached is the changed file set from the previous version.

It would appear that I accidentally deleted the xample.zip file instead of radicore_admin.zip. I have recreated the radicore-2017-08-03.zip file which you can download again. You can ignore the contents of radicore_admin.zip.

The existing xample application will continue to work with the latest changes to the MENU database.

I use an htaccess.txt file instead of a webserver conf file as some users install Radicore of a shared server and do not have access to the conf file.
