Subject: V 2.19.0 - include\_path

View Forum Message <> Reply to Message

Hi Toni,

after installing V 2.19.0 I get the following error when calling logon.php:

Fatal error: require(): Failed opening required 'include.general.inc' (include\_path='.:/usr/local/lib/php:/home/radicore/includes') in C:\xampp\htdocs\radicore\menu\logon.php on line 28

The include\_path in my php.ini directs to the correct directory. What can I do?

Best regards,

Juergen

What is the correct directory? If that directory is not shown in the error message then that directory is not being searched. Do you have an htaccess file which modifies the includes\_path?

I only copied all the files of V 2.19.0 in my directory.

I attached a screen shot of the phpinfo.php of the include path.

## File Attachments

1) radicore v 2.19.0.png, downloaded 1181 times

include\_path ::/usr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php:/home/radicore/includes ::/wsr/local/lib/php://home/radicore/includes ::/wsr/local/lib/php://wsr/local/lib/php://wsr/local/lib/php://wsr/local/lib/php://wsr/local/lib/php://wsr/local/lib/php://wsr/local/lib/php://wsr/loc

You haven't answered the question "What is the correct directory?" If this directory is not in the include\_path then that is your problem.

The correct directory is c:\xampp\htdocs\radicore\includes.

It is shown in the column master value of the directive include\_path in the phpinfo.php, separated by semi-colons.

It was the .htaccess file. I copied the file coming with the new version V 2.19.0 and this caused the problems. When I change the include\_path in this .htaccess file everything works fine again.

You should have noticed that the error message did not show the correct directory in its include\_path, and this should have given you a clue that the default setting in your php.ini file was being altered at runtime.

Whoops! I will try to remove that from future releases.

I've configured radicore with the following setting. I am a window user.

PHP 5 and above and Apache version 2.4

1 => Include path in htacess file. My xampp in installed on D drive php\_value include\_path ".;D:\xampp\htdocs\radicore\includes"

2=> changing in php ini file. The include path in htacess and php ini files must be the same. include\_path = ".;D\xampp\htdocs\radicore\includes"

3=> changing in httpd.conf file <Files "htaccess.txt"> Require all denied </Files>

and

<Directory "D:/Apache2/htdocs">
 AllowOverride All
 Require all granted
</Directory>

Also uncomment xsl extension in php ini file.

for window user and php version greater than or equal to 5 and apache 2 path in htacess file php\_value include\_path ".;C:\xampp\htdocs\radicore\includes" path in php ini file include\_path = ".;C:\xampp\htdocs\radicore\includes"

copy and paste the provided files and directory lines under apache2 in httpd.conf file.

uncomment xsl extension in php ini file.

that's all.

It's amazing how easily it works when you follow the instructions.

The new version 2.20.0 has your include path in the .htaccess file.
