This version updates the TCPDF library to version 6.3.2 and includes a few minor bug fixes.
This version contains the following changes:
Database changes:
- none
Other changes:
upgraded TCPDF library to version 6.3.2
updated numerous classes to replace call to getFieldSpec_original(), which has been deprecated, to call loadFieldSpec() instead.
fixed bug in std.filepicker1.inc to deal with undefined variable $search, and to deal with the â€˜previous searchâ€™ button.
fixed bug in std.multi4.inc where it reset the value of $inner_where incorrectly.
fixed bug in std.pdf.class.inc to make FAQ134 work correctly.
fixed bug in std.search1.inc which incorrectly removed a field from $fieldarray.
fixed bug in convertTimeZone() method within std.table.class.inc.
fixed bug in formatData() method within std.table.class.inc which failed to call convertTZ function because $errors was not empty.
fixed bug in getData() method within std.table.class.inc to exit if call to _cm_post_getData() raised an error.
fixed bug in getEmailParams() method within std.table.class.inc which failed to set â€˜email_fromâ€™ address and â€˜email_toâ€™ address.
updated getPickerDir() method within std.table.class.inc to add an optional $search argument.
updated getWhere() method within std.table.class.inc to call $this->getPkeyNamesAdjusted() instead of $this->getPkeyNames().
fixed bug in initialiseFilePicker() method within std.table.class.inc to set the quicksearch bar in the correct place.
fixed bug in std.update1.inc to ignore any previous messages after performing an update.
updated std.validation.class.inc so that if a numeric value is entered in a dropdown control which is defined as 'string' it will be treated as blank. This is to deal with FAQ181.
