Subject: How to use search with Tree Structure screen (TREE2)

Hi Tony,

I included search button in List Tree Structure screen (flexible), but it is not working. I generated search function on standard way through LIST1 Pattern on x_tree_node table.

Thanks in advance

I have never implemented a search option on a tree structure. That is why none is available in my example application. A tree is comprised of different nodes at different levels, so how do you envisage that such a thing would work?

Hi Tony,

I saw that it is not possible. I solve the problem on the other way, I changed structure of application, and now tree_type is projects for my purpose.

Thank you
