Subject: How to change node_desc in Tree_structure (TREE2)

Hi Tony,

I try to put new column in teee_node table node_desc_long, and to put in tree_structure.list.screen.inc, but it is not working. I investigate and find that in _cm_GetNode you put select with join, where I found node_desc ...Which changes and where is necessary, I have to make, for this purpose (to have new column node_desc_long instead of node_desc) in List structure screen.

Thanks in advance

If you want to select column 'node_desc_long' instead of 'node_desc' then go to the _cm_getNodeData() method and change the contents of $this->sql_select so that it reads 'node_desc_long' instead of 'node_desc'. It really is that simple.

I should have pointed out that you copy the _cm_getNodeData() method from std.table.class.inc into your particular table class BEFORE you change it.

Hi Tony,

Sorry, but I did not see that node_desc_long was no edit, and I see "hidden" instead of text but I was out of concentrate.

Thank you
