Hi.

Before starting to test radicore I would like to see al lthe features it support in a demo generated page. Is there any demo genereted page where I can see what it can do????? As far as I see the actual demo page is the demo of the working/developer aplication tool.

Thanks
MAC

It is not possible to have all the features supported by Radicore demonstrated in a single page as each page is based on a different transaction pattern, and each pattern has its own set of features. The same pattern can be implemented many times over with many different database tables, but each implementation has the same structure and behaviour with just the content (database table) being different.

All the available pages are generated using the Radicore development process. As well as the AUDIT, DICT, MENU and WORKFLOW subsystems there are some prototype applications, as documented in http://www.radicore.org/prototypes.php, which show how it can be used in real-world situations.

If you look closely you will see at least one working example of every transaction pattern. What more could you possibly want?
