This version contains the following fixes and enhancements:

fixed column sizes in audit database to be same as on menu and dict databases.
fixed task 'audit_dtl(list)3exact' so that 'pattern=exact' is in the 'settings' field instead of the 'Selection (fixed)' field.
fixed 'import database' and 'import columns' functions in Data Dictionary to work on a shared server where a value is defined for $GLOBALS['dbprefix'].
changed 'import database' so that it will allow the user to choose which database to import instead of automatically importing all available databases. It will also import the table names and then activate the 'list tables within database' function.
