Tony,

Not sure whether this is anything to do with the way PDF documents are produced in Radicore or something independent...

I'm producing some documents specifying A5 in the page definition. However, when I come to print the document from Adobe Reader the page setup always defaults to A4 and has to be changed manually before the document can be printed (otherwise the A5 layout prints centred to an A4 page).

Is this something related to the radicore output that can be corrected?

Graham

This has nothing to do with the way that Radicore produces PDF documents. It is simply that A4 is the default setting for your printer. Even if you activate the printer from the Adobe Reader while accessing an A5 document you will still see A4 as the default setting. The funny thing is that that the printer driver can automatically detect if the page orientation is portrait or landscape, but it cannot detect the size.
