Hi Tony,

Im still new to your framework. When I was doing Tutorial 2, on creation of record in x_option : created_user defaulted to UNKOWN. I logged in as MGR.

After I update the same record, I noticed that revised_date and revised_user were unpopulated. Is that how this is suppose to behave?

Stephen

Each time you update a record through the framework then REVISED_DATE and REVISED_USER should automatically be updated. This will only work if you have set the AUTO-UPDATE option for those fields in the data dictionary, and have exported those details to your application.

If you look in your '<table>.dict.inc' file and do not see 'autoupdate'=> 'y' in the array for the REVISED_DATE and REVISED_USER fields it means that you have not instructed the framework to update these fields.

alrite mate, will do so in future.

I checked the <table>.dict.inc files for x_options.

---And I tried updating the same records again. Unfortunately, I failed to reproduce the problem. Strange.

---I also tried creating a new record and it is behaving correctly. Strange.

I did not change any files. Strange.

Thanks for your help.
