Is there a way to set the select checkboc to 'selected' within a transaction?

I have a LIST1 transaction that is restricted to having only one entry within the code. I'd like to be able to set the checkbox to 'selected' on display. Even better would be to remove the checkbox from the screen (easy to do) but have it selected by default.

Simple. All you have to do is put code similar to the following in the _cm_post_geData() method:

```
    foreach ($rows as $rownum => $rowdata) {
        if ($rowdata['id'] == 'whatever') {
            $rows[$rownum]['selected'] = true;
        } // if
    } // foreach
```

It would be a waste of time removing the select box from the screen as there would be no way to mark the row as selected.
